***Election/Restrictions***

Restriction to one of the following inventions is requirement under 35 U.S.C. 121:

- I. Claims 41-44, drawn to reading a plurality of data from a data storage area of a disc of a computer system in response to a communication between the disc and a computer, the disc including a communication control circuit; and when the read data does not include control data for controlling the computer, obtaining the control data from a source external to the computer system via the communication control circuit of the disc, classified in class 710, subclass 74.
- II. Claim 45, drawn to determining whether a data storage area of a disc is storing an emulator in response to a communication between the disc and a computer, the disc including a communication control circuit; and downloading an emulator by making an auto-call from the communication control circuit to a software provider if the data storage area does not include an emulator, classified in class 710, subclass 11.

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as "an emulator in response to a communication between the disc and a computer, *the disc including a communication control circuit; and downloading an emulator by making an auto-call from the communication control circuit to a software provider if the data storage area does not include an emulator,*" See MPEP j 806.05(d).
